REFERENCE FOR APPEL OSBORNE LANDSCAPE ARCHITECTURE

It is with sincere pleasure that I author this letter of recommendation pertaining to the qualifications, performance effectiveness, and human relations skills of the partners and associates of Appel Osborne Landscape Architecture. During the past two years, representatives from the West Genesee Central School District have worked on renovation/reconstruction projects utilizing the expertise of the landscape architects at Appel Osborne.

The primary responsibilities of the architects have been design development, site monitoring of construction, and environmental controls. Examples of improvements that the firm has been directly involved with include the following:

- Construction of a turf field within a new high school stadium
- Construction of an all-weather track surrounding an existing high school stadium
- Construction of a sod practice field
- Construction of a concession stand plaza area adjacent to an existing high school stadium
- Construction of a school bus parking and drop-off area in front of an elementary school
- Construction of a new softball field at the high school site
- Reconstruction of a baseball field at a middle school site

Without question, representatives of the firm have been extremely knowledgeable, personable, well-organized, and responsive to our needs. In addition, their effective communicative skills enhance their ability to work well with people from different occupational backgrounds. Through their relentless efforts and cooperative spirit, they have significantly contributed to the success of our renovation/reconstruction projects.

If you are interested in more specific information regarding the performance of the individuals at Appel Osborne, please call me at your convenience at (315) 487-4562.
